

NTT Communications

Total Enterprise Network and IT Solutions with Unparalleled Customer Support

Our Heritage – Commitment to Quality Is in Our Genes

Ranked 31st overall on the list of Fortune Global 500 companies¹ with over \$100 billion in operating revenues, Nippon Telegraph and Telephone Corporation (NTT) is one of the world's largest information and communications service providers. NTT's service capabilities include fixed lines and mobile communications as well as Internet and systems integration services. With more than 100 years of communications experience and nearly 200,000 dedicated professionals worldwide, NTT has a long history of innovation.

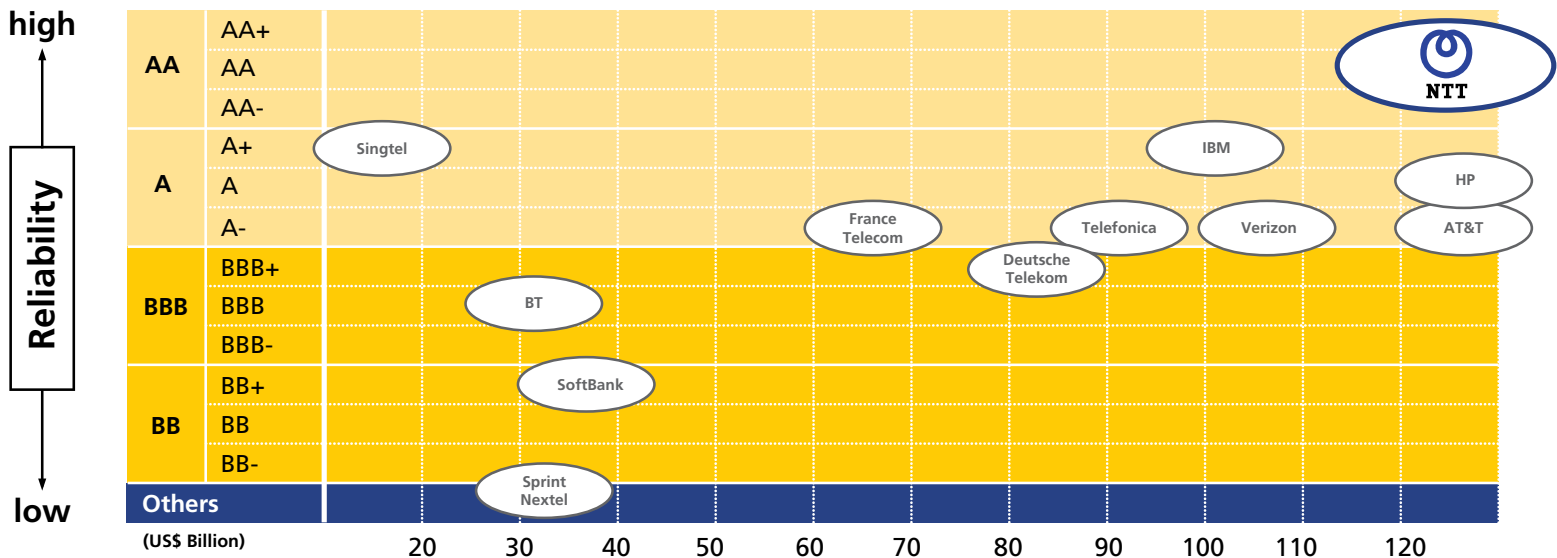

NTT Communications Corporation is the global data and IP services arm of NTT, catering to the diverse end-to-end network and IT solution needs of multinational corporations. NTT Communications provides stability and accountability to its customers around the world.

NTT Communications sets the highest standard of quality in its offerings. We work with our customers and partners to understand their needs and priorities through various functions. Arcstar™ Carrier Forum, our global partner carrier consortium to discuss and implement quality improvement initiatives for operational excellence and higher customer satisfaction, is just one such example to show our commitment to enhance our products and services incorporating their voice.

NTT Communications

Resources and Commitment to Deliver Optimal Solutions to Our Customers

Our Infrastructure – Coverage, Resilience, and Bandwidth to Support Global Enterprises

NTT Communications covers over 150 countries worldwide, with the most extensive coverage in the Asia-Pacific region. Our strong Asia-Pacific Layer 1 network provides redundancy with double triangles connecting major Asian cities and a ladder network to link Japan, the U.S. and Europe. Diverse network paths with auto-reroute capability in layer 2 and layer 3 networks guarantee quality and performance.

We are continuously upgrading our capacity and adding direct routes to connect Asia, the U.S., Europe and Oceania for more diversity and low-latency. Our recent investments include the Trans-Pacific Express (TPE) cable, a trans-Russian connection, and the PC-1 trans-Pacific network, and Asia Submarine-cable Express (ASE) to name a few.

The NTT Communications Global IP Network, our global Tier 1 IP backbone, currently boasts one of the industry's largest dedicated trans-Pacific Internet bandwidth managed under one single end to end policy with an industry leading SLA. The network is also renowned for its award-winning commercial implementation of IPv6.

Our data centers are operated in over 30 cities in 20 countries/regions outside Japan under the same consistent NTT Com group's standard for global quality control. We provide managed hosting capabilities in the key markets of North America, Asia, and Europe, with local service portfolios that best satisfy respective local market needs.

Armed with the winning combination of reliable and extensive closed networks, world-leading open network resources, and a global data center footprint, NTT Communications is poised to provide strategic infrastructure to support varied enterprise solutions today while accommodating future cutting-edge technologies and business innovation.

Our Integrity – Continuous Service Enhancement in Scope, Quality and Delivery

NTT Communications offers a wide range of both custom and standardized enterprise solutions, combining our expertise in private line, MPLS IP-VPN, Ethernet, Internet networking, security, physical, virtual and cloud hosting, and professional services. The optimal combination of our network and value-added services offers corporations the convenience of a one-stop shop with the quality of a custom-developed solution.

Underscoring the strength of our service portfolio is our commitment to deliver superior customer service. Coupled with our financial strength and engineering resources, the company's best assets are the dedicated people working under the NTT Communications name. It is no wonder that our customers stay with us and work with us, continuously giving us an opportunity to exceed their expectations.

Since its inception in 2000, the Arcstar™ Carrier Forum has been our signature quality improvement initiative for end-to-end service quality enhancement. Inaugurated as a regional conference for Asian local access providers, the forum has expanded its scope and coverage to become a global consortium for international telecom companies and customer representatives to discuss quality control and service process issues.

Nineteen carriers from 12 countries participated in the March 2010 forum in Tokyo. The forum members reduced the number of long-duration outages by 40% over the last two years.

Customer Advantage of the World's Most Resourceful Carrier

Our Value – Capabilities and Resources That Make the Difference

At NTT Communications, our commitment to excellence never ends. Recognized as a trusted information and communications technology (ICT) partner for global corporations, NTT Communications is dedicated to delivering innovative, reliable, and seamless services leveraging the company's strength in:

Customer-Focus

- Continuous and through pre- and post-sales account support by a multilingual global team of local professionals with the convenience of a single point of contact.
- 24x365 uninterrupted customer circuits monitoring via Global Network Operation Centers in Tokyo, London, and New York.
- End-to-end full accountability for a troubleshooting process at our local customer front (LCF) in respective markets.

Robust Infrastructure

- Reliable and diverse private networks with redundancy in transmission routes and node equipment with added security of dual access lines and IPsec as backup options.
- Industry-leading, IPv6 compliant Tier 1 Internet backbone carrying one of the largest trans-Pacific IP traffic
- Enterprise-class private cloud service at secure and eco-friendly green data centers with multiple level of security and redundancy in network and hardware for superior performance and uptime.

Quality Commitment

- Optimal local access availability and quality obtained through strong working relationship with local partner carriers developed through "Arcstar™ Carrier Forum", our annual carrier meeting to discuss various quality assurance initiatives.
- Data Center service quality assured through the NTT Communications Data Center Standards built upon compliance with global industry standards such as The Uptime institute and the TIA942 standard.
- Delivery-driven, strong Service Level Agreement.

NTT Communications

Local Accountability with Global Reach

With dedicated professionals and offices in major locations around the world, NTT Communications is ready to support your global business requirements. Our teams collaborate across regions and time zones to ensure quality, reliability and an integrated approach to customer support.

Voices of Our Customers

"One of the SDV's strengths is the specialists in transportation and logistics business, and the efficient IT systems that support those specialists. Quality of global network is a key element for us because our global business relies on it. NTT Communications has been a reliable partner that provides high quality network over the years. Arcstar Carrier Forum shows their commitment to quality and this makes NTT Com our valuable partner."

Laurent Karoly, Regional Director, Management Information Systems for Asia-Pacific, SDV International Logistics

"The quality of our global network is one of the key elements for CME Group because our business provides a trading environment to our customers around the world approximately 24 hours every trading day. NTT Communications takes a very unique approach to the challenging task of controlling and improving the quality of the network across the globe by hosting the Arcstar Carrier Forum and sharing their experience and expertise with partner providers. Their continuous commitment to quality, involving their partners in overseas countries, certainly qualifies them as a valuable partner of the exchange."

Kevin Fortcamp, Associate IT Director, the Chicago Mercantile Exchange

Voices of the Industry

"One of the big criteria to look at when choosing a provider is their ability to deliver the solution and that's across the entire network lifecycle from being able to help you with the planning design and architecture, through the implementation phase, designing the network and even on the back end being able to help you manage it better or even operate it yourself in a complete outsourced-to-manage model. For a company looking to expand into the APAC region, NTT Communications is an excellent choice."

Zeus Kerravala, Senior Vice President, Yankee Group

"NTT [Communications] has a very strong reputation for well-defined troubleshooting and escalation and for quick remediation. NTT [Communications] should be considered by MNCs that are expanding their operations in Asia-Pacific and that are interested in using an established international services provider with deep regional roots."

Brownlee Thomas, Ph.D., Forrester Research, The Forrester Wave™: Managed Global MPLS Services, Q4 2009, October 2009

About NTT Communications Corporation

NTT Communications provides a broad range of global networks, management solutions and IT services to customers worldwide. The company is renowned for reliable, high-quality security, hosting, voice, data and IP services, as well as expertise in managed networks and leadership in IPv6 transit technology. NTT Communications' extensive infrastructure includes Arcstar™ Global IP-VPN and Global e-VLAN, as well as a Tier-1 IP backbone reaching more than 150 countries in partnership with major Internet service providers, and secure data centers in Asia, North America and Europe. NTT Communications is the wholly-owned subsidiary of Nippon Telegraph and Telephone Corporation, one of the world's largest telecoms with listings on the Tokyo, London and New York stock exchanges.
