

# Intrusion Detection and Prevention Services

NTT AMERICA MANAGED SECURITY

## STANDALONE NETWORK-BASED IDS/IPS

- High-powered, high performance platforms
- Continuous signature updates
- Security portal reporting, status, updates, etc
- Accurate and pre-emptive protection
- Passive/monitoring or in-line/active blocking
- Blocks and alerts on malicious activity
- Expert configuration of these complex systems
- Rapid and highly effective incident response
- High availability options
- Cost effective access to leading security solutions that evolve with new threats

## Protecting IT Infrastructure

As security threats evolve in complexity and volume, enterprises are finding that firewalls are simply not enough. There are more and more complex and intricate schemes to disguise malicious code in seemingly legitimate data streams and messages. Enterprises need proactive solutions to prevent illegitimate access and harmful forays into their applications and servers. Types of intrusions can negatively affect their business and result in significant costs, losses, or worse. In addition, they must also comply with financial and regulatory compliance standards.

## CUSTOMER OPTIONS

The firewall is still a key part of any security solution, but overall protection can be significantly enhanced with Intrusion Detection (IDS) or Intrusion Prevention Services (IPS). Either service is delivered via a single device, depending on its location in the network and how it is configured (monitoring IDS or active/blocking IPS). NTTA customers can choose from:

**Intrusion Detection** – Passive monitoring; non-invasive, deep packet inspection with corresponding alerts and reports on identified threats

**Intrusion Prevention** – All of the features of IDS with the additional ability to mitigate & block/drop known malicious and other potentially harmful traffic or content

NTT America uses IBM Proventia IDS/IPS platforms that are continually updated to address the latest threats. In addition, both solutions provide comprehensive, actionable data via the easily accessible security dashboard.

## WHY NTT AMERICA IDS/IPS SERVICES?

- Services built around Proventia IDS/IPS solutions
- High accuracy, high-powered inspection devices with continuous signature updates
- Further inspection to catch zero-day attacks and threats that have not yet been formally identified or their signatures not yet distributed for blocking
- Detect, alert, and defend/mitigate against evolving threats
- Complex security solutions, monitored & managed by skilled & credentialed security experts ensuring the most effective security posture
- Customers can save on training and apply their own skilled resources elsewhere in their operations,
- Fully-managed, 24 x 7
- Access to the NTT America Security Portal statistics & reporting
- Paired with a firewall, IDS/IPS provides customers a second and much more discerning layer of packet inspection to protect customer information, data, systems and applications. This helps to maintain compliancy by identifying key vulnerabilities to patch, preventing systems and applications from being compromised or harming their own customers

## MOVING FORWARD

Contact us today to learn more about how NTT America's Network IDS/IPS solutions can provide the performance and security your company requires.
