

Professional Services

Data center transformation & cloud readiness consulting

NTT America's dedicated technical experts are available to meet your unique needs and optimize the performance of your IT infrastructure

What is Professional Services?

As the world leader in data centers and networks, NTT America has been at the forefront of helping global businesses manage the transition to the cloud. We have developed customized cloud offerings to fit the unique business needs of our clients. Unlike traditional out of the box solutions, NTT America's experts will consult with your IT team to implement a new solution with dedicated resources that can adjust as your business grows.

Migration Services for Greater Scalability

Our migration experts work one-on-one with you to address any architectural, business, or operational challenges across your entire IT infrastructure. We can efficiently migrate your existing server infrastructure and/or customer account base from your current platform to any target platform of your choice. We will work with you every step of the way and can establish a deployment strategy to support and ensure a successful migration.

Data Center Transformation

Infrastructure Modernization

Infrastructure modernization includes cloud to cloud, P2V, physical hardware upgrade, and optimization.

Integration and Automation

We will help you streamline operations by automating routine and often manual tasks and processes.

Cloud Migration

We will help you move to just about any cloud environment including VMware, CloudStack, AWS, Biz Hosting Enterprise Cloud, etc.

Data Center Migration

As every migration is unique, NTT America will work with your team and assist in migrating your data from one data center to another.

Custom Infrastructure

Creating a custom infrastructure begins with understanding our customers' needs. The first step in this process is consulting. NTT America's professional infrastructure team will consult with your organization to understand your unique business needs, priorities, and goals.

Once we fully understand your organization's objectives, we will recommend the best cloud solution to meet your business requirements. We will help you choose between a custom built NTT America cloud solution or another infrastructure using your preferred cloud provider. Clients may choose from:

- Any Cloud
- A Custom Offering
- Public, Private, or Hybrid Cloud
- One of the many NTT Cloud Solutions

Why NTT America Professional Services?

- Cost Containment and Investment Management – hiring us for a limited project instead of hiring a team of engineers
- Reduce Your Risk – modernizing and transforming your infrastructure reducing security breaches and downtime
- Achieve Operational Scalability – leverage NTT America's infrastructure experience and global reach
- Accelerate Your Time to Market – remove the burden of dealing with hardware and focus on your core competencies
- Proactive End-User Engagement During the Project – allow us to manage the project and take on the complexity

Professional Services Approach - ADDIE

Analyze

We audit your current environment, track capacity of your infrastructure, and document technical requirements.

Design

Our team will design a target environment, architect the infrastructure, and draft the migration process.

Develop

Dedicated experts will create migration assets, build a prototype, and test the process and tools with customers.

Implement

We will then deploy infrastructure for your new solution, execute the migration plan, and facilitate service transition.

Evaluate

Your dedicated account manager will establish reporting and metrics for your project, review each phase with you, and adapt plans from feedback of each review.

NTT America Value

- We have over 20 years of experience managing tens of thousands of servers in multiple data centers worldwide
- NTT America allows you to refocus your IT personnel on strategic business initiatives and gain the flexibility to optimize your operational efficiency
- By partnering with us you are virtually extending your IT staff and service portfolio, freeing your valuable in-house staff and resources for critical strategic projects
